

Multi Position
Technology Ready
Acute Care

Our Floorline i Plus is a complete care management solution. With its extensive positioning, electronic CPR function and an open bus digital control box that allows for future upgrades, the Floorline i Plus floor level bed offers the highest level of care combined with the maximum versatility.

Clinical and Patient Benefits

The Floorline i Plus floor level bed is the perfect solution for preventing fall injuries in hospitals and acute care facilities. The bed lowers to a distance of 10cm/4" from the floor and raises to a working height of up to 80cm/31.5" to help promote existing safe patient initiatives and caregiver safety. At a distance of 10cm from the floor, the patient rolls out of the bed instead of falling, avoiding the dangerous and costly implications associated with a fall. In addition, the need for extra monitoring of these at risk patients is greatly decreased, adding to overall financial benefits for the hospital as less staffing is required.

Optimal Features

The Floorline i Plus features standard positions

such as Trendelenburg, reverse Trendelenburg and electronic cardiac positioning. With a full assortment of accessories, a built-in technology that allows for future upgrades, and durable LINAK electronics, the Floorline i Plus is a complete care management solution.

Quality

Our products are designed and manufactured to meet all the requirements of relevant standards. At every stage of the development process, every single product is given extensive attention in design, development and manufacturing. This means that a user of this product feels confident with its reliability and the caregiver feels confident with its safety.
